

## HTTS – High Tech Trading System Fund

### Quantitative Trader (m/f)

---

#### QUANTITATIVE TRADING MANAGER

##### About us:

High Tech Trading System Fund is a dynamic, innovative, and young spirited systematic privately held fund that considers its employees as a member of their family. We have been growing exponentially in the past year and are looking for a new stellar Quantitative Trader to join our ranks.

Our fund's robustness is the result of over a decade of research by our visionary leader and many high level academic and technical specialists from around the world. We are backed by one of the major European family offices and with our international presence, we are aiming to become the world's largest systematic fund in the next 10 years.

##### Mission:

As a part of our R&D team, we are looking for a senior quantitative trader with 5 years of experience to research, implement and manage systematic intra-day trading strategies.

Advanced analytical/statistical/modeling capacity with some experience on high frequency trading and artificial intelligence and strong software-engineering skills are essential. Additionally, communication skills, vision to drive results, and a high-level of creativity and great management skills are required.

##### What you might be doing:

- Monitoring production of systematic trading strategies (position checking between broker and systems).
- Trading on stocks, futures, and options.
- Generating of log trades file after each session day.
- Improve and automatize the existing process.
- Manage the risk and the PnL of internal basket strategies.
- Fix the production issues (miss position, Virtual machines issues, data feeds, etc).
- Performing Trade Slippage Analysis and Transaction Cost Analysis (TCA).

##### What your background might look like:

- PhD and/or Msc degree or advanced experience in a quantitative field (mathematics, statistics, computer science, quantitative finance, data science).
- Experience on systematic trading execution.
- Good understanding of risk portfolio, risk measure and PnL contribution.

- Strong reactivity to detect anomaly bug and fix it.
- Programming skills is a plus.

Why you should apply:

- You will be working in a family atmosphere.
- Startup environment - your opinion will really count.
- A leading-edge technology to help you bring out the best of your work capacity.
- Offices in France (Paris) and Switzerland (Geneva).

We know a diverse and inclusive workforce brings divergent viewpoints and perspectives to the company. We are convinced that with many brilliant minds working together, we will achieve our goals.
