

QSS d.o.o.

Linux System Engineer (m/f)

#weareqss and we are looking for Linux System Engineer (m/f)

This job ad is for you if you are a Linux System Engineer, biting to execute assignments. You have valid certificates in the field of Linux/UNIX technologies or ongoing certification. You are an analytical and excellent troubleshooter. You are initiative and able to operate on your own, but also to cooperate with colleagues and clients. You are enthusiastic about your work and willing to learn and improve your skills. Your preferred corporate culture is a mix of new-age dynamics and some solid old traditional structures - we are a place for you!

You will be in charge of:

- System infrastructure: you will be in charge of planning and designing system infrastructure and services. You will be part of the team responsible for supporting and maintaining clients' IT systems and services on-premise and in the cloud. You will work with ease if you already smoothly understand automation tools, such as Ansible, Puppet, Chef, etc.
- System development: You will be developing complex systems and working on cutting-edge technological innovation in the domain of cloud & microservice container platforms. As part of a team, you will be designing new systems and services for clients and internally for QSS. Your experience with microservices and container platforms (OpenShift, Kubernetes) will come to the fore and, you will be the shining star of the team!
- Performance: as you are skillful with monitoring tools (Zabbix, OpManager, Netflow, etc.), task to monitor system condition and system performance would be an easy thing, and you will be doing this for a client and internally for QSS
- Training and personal growth: we are aware of the importance of knowledge and skills development. So, you will be able to invest in your professional growth and development through training, education, and certification, through your development plan
- Other: you already know that at the end of every job description comes "other related duties as assigned" - but we positively mean this. We hope you will shape your job responsibilities by adding value to QSS.

If all of this sounds good to you, well we hope you fit the following requirements:

- Bachelor or Master degree in Computer Science
- At least 2 years of experience as a System Engineer
- Knowing one of the scripting languages (Bash, PowerShell, JavaScript)
- Experience working with Linux and RedHat technologies (OpenShift & Ansible)
- Excellent verbal and communications skills in English

Sounds like a good fit?
