

## Integration Owner Embedded Hardware (m/f)

---

- Assisting with Embedded Hardware Product Requirements creation - Writing Embedded Hardware System Technical requirements - Reviewing Product Requirements and Device Technical Requirements - Conduct in-depth feasibility studies and provide technical guidance for product development. - Provide technical leadership and mentorship to Embedded Hardware teams - Review of Embedded Hardware Design and Testing documentation - Collaboration with Product Management, Research and Development, Testing and Certification, Production and Quality Management departments - Collaboration with cross-functional teams, specially Embedded Software, Embedded Hardware and Mechanical engineers, ensuring seamless integration of embedded systems and reliable device operation - Schematic and Printed Circuit Board reviews focused on System Integration - Wiring Harness and Connector architecture definition for all product portfolios - Technical Management of Semiconductor Component, Connectors and Wiring Harness Request For Information (RFI) process for all product portfolios - Writing Embedded Hardware development documentation - Supporting Embedded Hardware teams with equipment selection - Defining and documenting Embedded Hardware procedures and best practices
